

ISGUS TIME MANAGEMENT

Your partner for complete solutions!

Locking Cylinders

- ▶ Solutions for Individual Doors
- ▶ Precise Projecting

Company Mission Statement

Our professional consultancy guarantees the best possible solutions for our customers. We carefully analyse your requirements and provide you the best solutions for your doors. Our expertise lies in our individual locking systems for your door management.

Our Experience

Security and electronics is our focus and our knowledge is based on a long term market presence and experience. Our partner are the market leaders in the security field and all use the latest technologies.

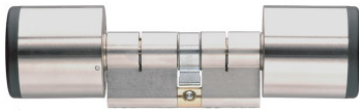

Precise Projecting

Our expertise in planning and analysing, as well as support of your project, gives you the security that you are saving time and money. If a residence or your company premises have a large variety of locks and keys that should be brought up-to-date, we can manage the project from beginning to end.

The Benefits

- High security with a maximum of flexibility
- Modular structure of cylinder locks for door strengths between 35 - 140 mm
- As well as being intuitive, simple and fast, our locking cylinders also have optical and audible capabilities
- Flexible time ranges for permanent and / or temporary access as well as door open function
- Event storage for up to 500 access events
- Can be combined with any existing locking system by implementation of an electronic chip on existing key
- Interface to building systems such as access control, barriers, turnstiles, electronic door openers and lifts
- Integration with other systems e.g., Time Management or Canteen Data Collection

Features of our Locking Cylinder Range

No preparation required

Suitable for each door profile and no cabling required makes this appropriate for both old buildings and new constructions.

Fast mounting

In a few minutes and by means of a screw driver a mechanical cylinder can be exchanged with an electronic product.

Easy handling

The easy and intuitive handling allows immediate use after completion of the installation without any need of user training.

Maintenance fee

The battery driven electronics are capable of up to 60,000 operations; the last 1,000 are accompanied by an acoustic signal. The battery can easily be exchanged without dismantling the cylinder; this will take only 2 minutes to do and may be requires to be done every 4 years.

Easy commissioning

For smaller systems, up to 99 transponders can be authorized per cylinder by means of a programming card without any need for software. For lager systems up to 60,000 cylinders are administered via a PC and a mobile programming device.

Integration with ISGUS Solutions

Integration and extension to ISGUS solutions for Time Management or Access Control is possible at any time. The advantages are obvious, each user only requires one identification medium to open doors, record all his In's and Out's as well as having the ability to release lifts, barriers and turnstiles.

No redundancy of personal data or individual authorisations for the different ISGUS modules.
